

Onna Managed Private Cloud

Design, Implement, and Deploy Onna on your Private Cloud.

Benefits

Rapid Implementation: An Onna Expert will install and configure the solution, test it thoroughly, train your staff on basic operation and architecture, and document the settings.

Reduced Risk: Onna experts will reduce your implementation and deployment risk by working alongside your team to receive expert advice on installation configuration, and deployment.

Knowledge transfer: Your deployment team will become familiar with Onna's core infrastructure and develop an understanding of the best practices for deploying it in your private cloud.

Managed Releases: Regular documented release schedule managed by an Onna expert ensuring you have the latest features & functionality.

Onna integrates all workplace applications together, allowing anyone to unify, protect, search, automate, and build on top of their organization's proprietary knowledge. Our Knowledge Integration Platform can be integrated with any cloud or on-premise app to support eDiscovery, Information Governance, and Knowledge Management.

Onna offers services to stand-up your own managed Onna platform in your private cloud environment such as Google Cloud or Amazon Web Services. This offering includes Architecture & Readiness Planning, base implementation of Onna components, training, testing, go-live support, and post go-live administration with management of new releases and enhancements.
